

Please do not let the National Association of Broadcasters stifle competition!. Xm Radio is providing a needed service for travelers and commuters by broadcasting traffic and weather. We are able to hear th reports more frequently than on regular radio. Also, trvelers and truck drivers are able to hear the reports before they get to the area and are able totake a different route or wait until the traffic clears up before entering an area. Another reason for XM radio to broadcast traffic and weather, is that, radio station signals do not travel far enough or ar over ridden by stronger signals outside of an area. With xm radio, there is a clear signal that we can tune in to. Thank you for your time.
